

Decorol[®] System

Turn key plants and know how for the decoration of metal profiles, sheets and accessories

Since its foundation in 1973, The Decoral Group has pursued the quality evolution of currently available finishes for aluminum and other metals by developing the technique for transferring to existing powder coat finishes, detailed designs and images such as wood grain, marble, photography, virtually anything including text. The result of this development is two fold: the first being Functional Durability and the second is the inclusion of unlimited decorative options. With this creative innovation, aluminum will never be the same, it has found a new spirit of ecology and versatility opening the way to a wide range of possibilities for architects, designers, and decorators, providing a wide range of options and solutions for today's demanding customers. Currently, Decoral System continues to develop and build technologically advanced equipment and plant systems with "know how" based on extensive experience in innovative finishing techniques. Thanks to Decoral's in-house laboratories and quality control standards Decoral can produce finished products backed by thorough and lasting guaranties.

PATENT

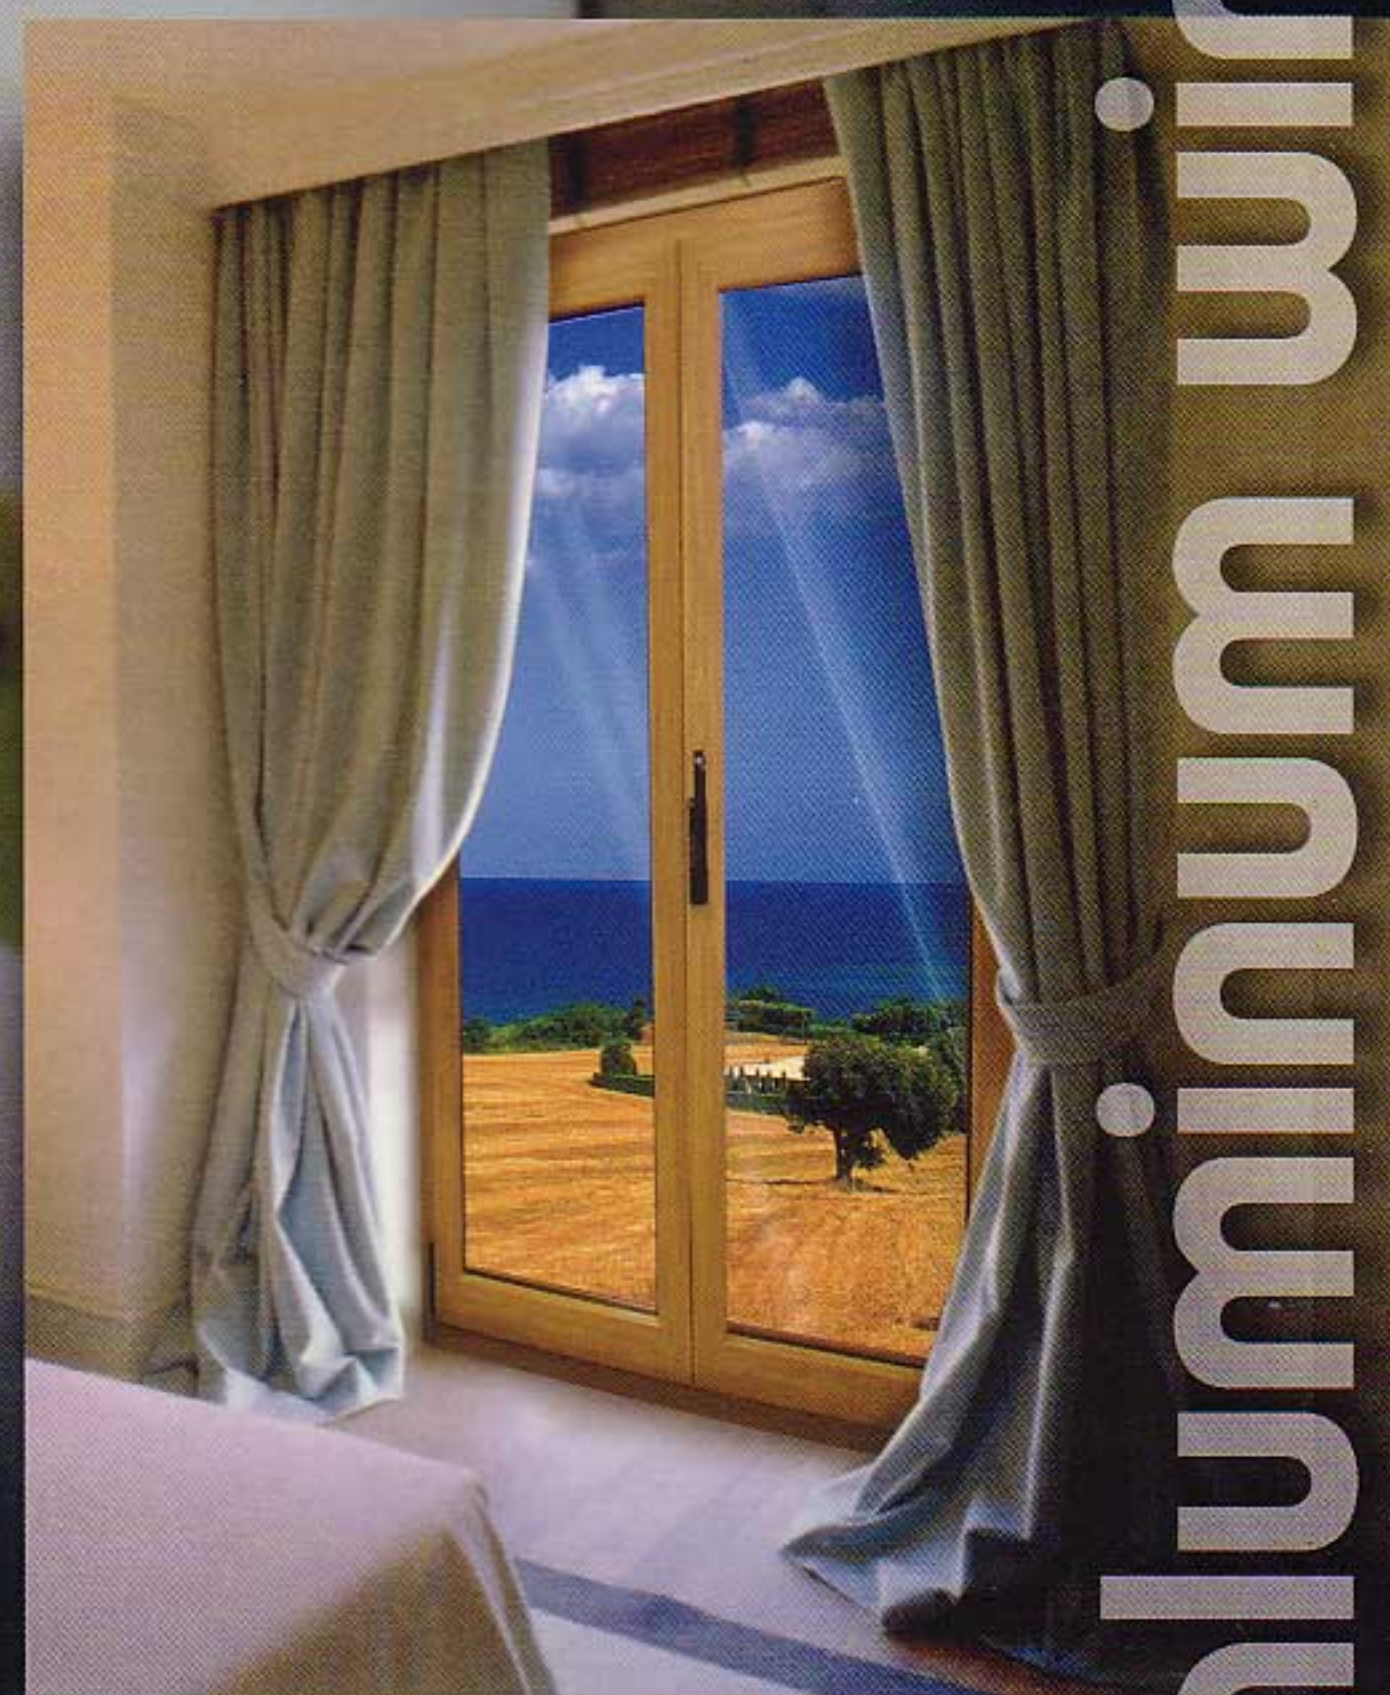

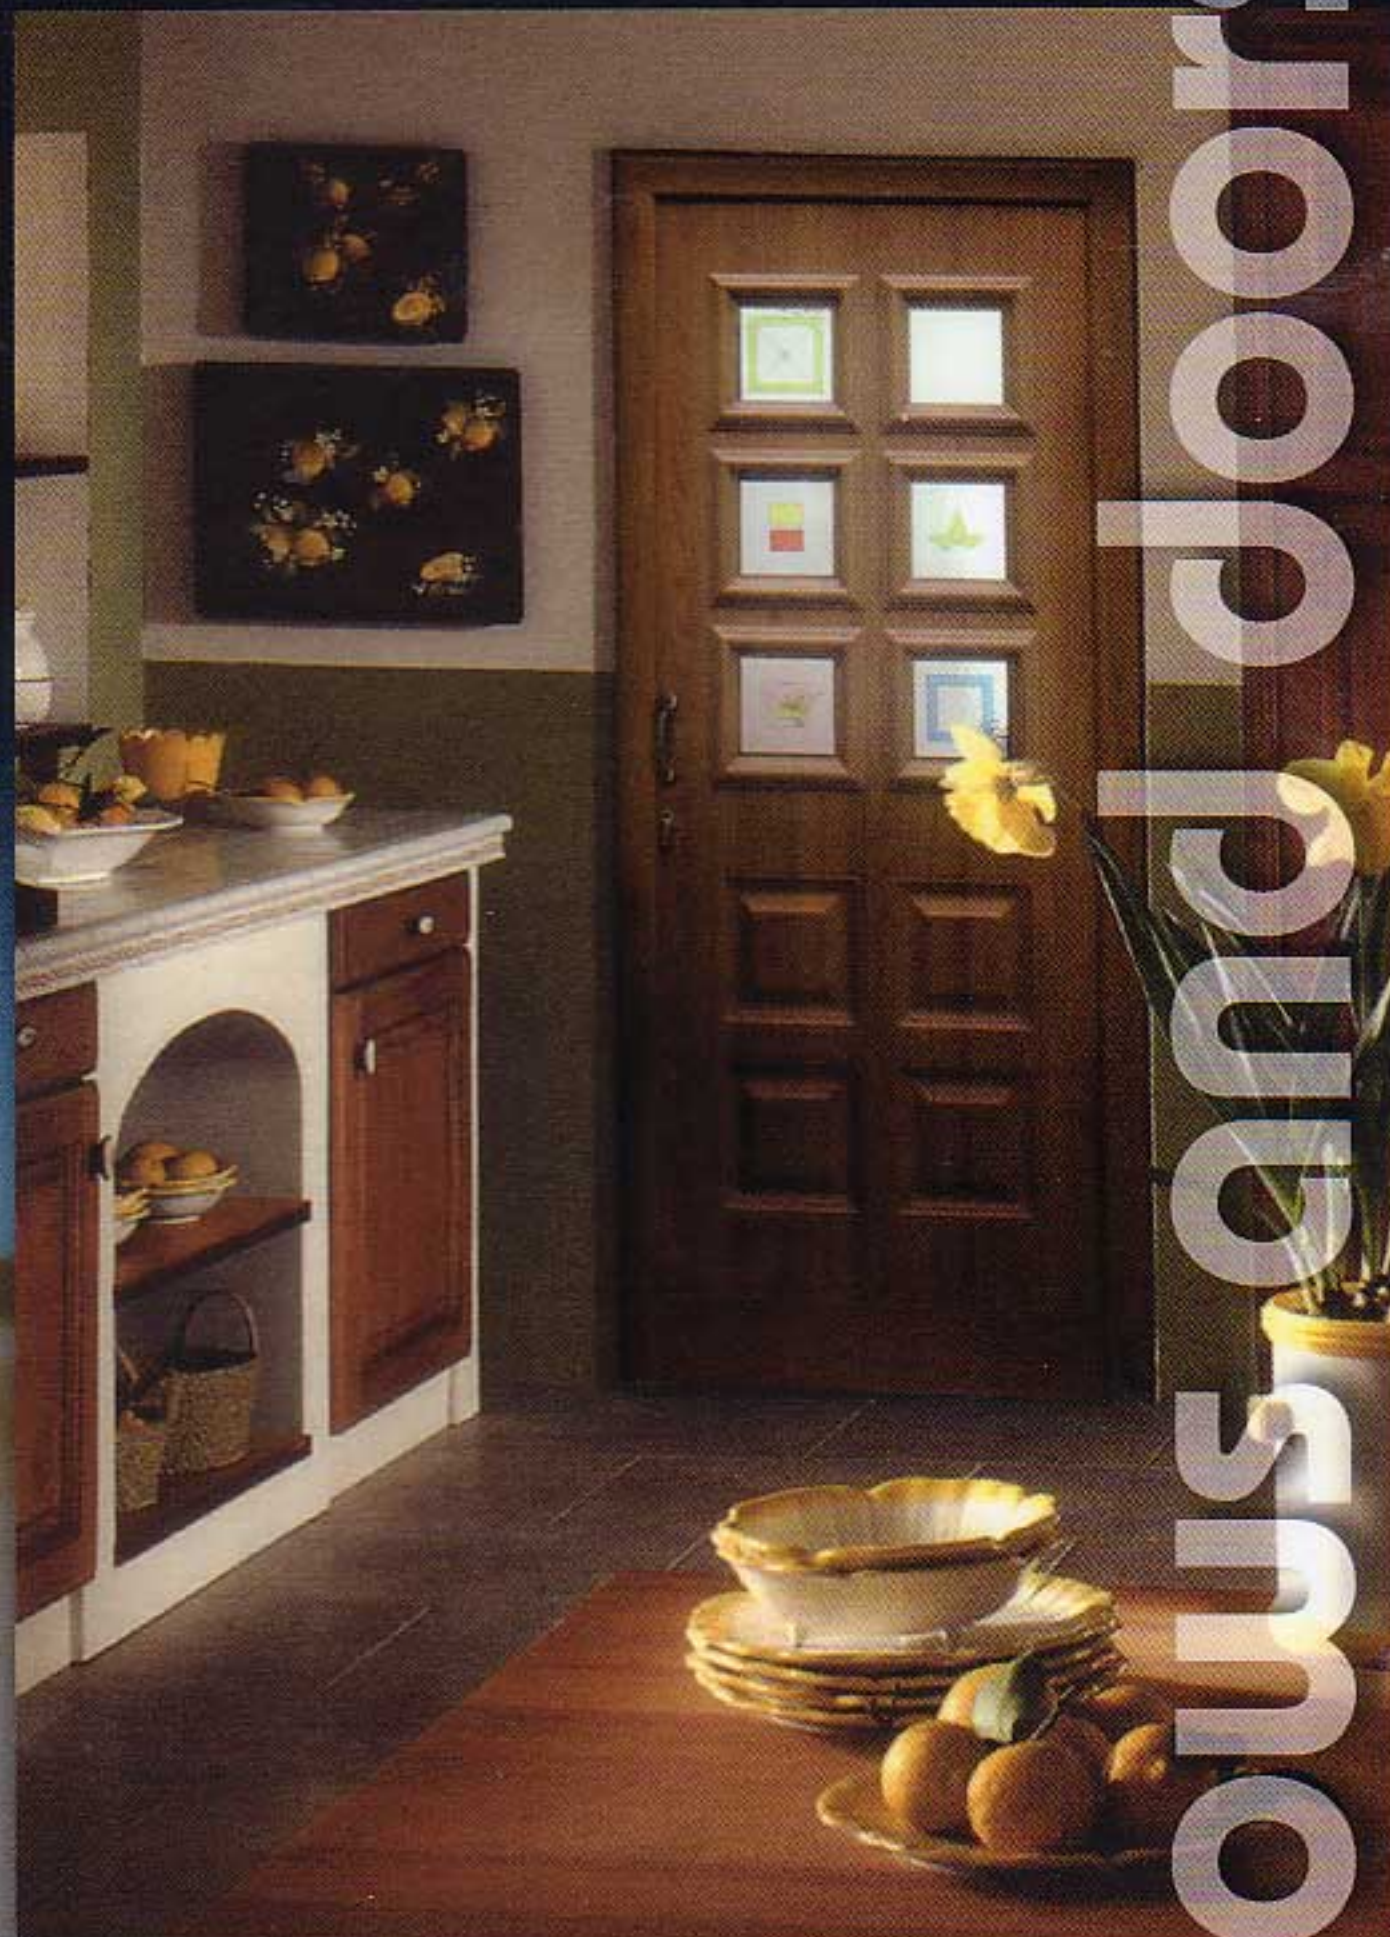

With unique and specialized designs that have been developed over the past decades, Decoral System can provide its broadly varied range of customers/users/licensees with plant systems, products, and service to meet the most exacting and specific needs of the market. The success of the Decoral System has created a bridge to unite esthetic and functional design with no sacrifice from either. Decoral Plants and products are currently present in more than 50 countries around the world.

an Advantage

What is Decoral®?

The Decoral System is an innovative technique for the application of precision, multi-color designs and patterns to flat, curved, or irregular surfaces. Our system permits the transfer of our formulated inks into surfaces coated with Decoral's Powder Coating, to produce wood-grain, marble, granite, or other patterns or images that are virtually indistinguishable from the real thing.

Decoral finishes have been subjected to the most demanding testing for durability, ruggedness, chemical and weather resistance. The product has proven its ability to withstand the rigors of such testing while maintaining their gloss and color. The results of this testing allow us to offer long term warranty of our finishes for the most demanding of indoor or outdoor environments.

aluminum windows and doors

A guarantee of Quality

Laboratory experiments and frequent testing, of our finished product guarantees not only a desirable appearance, but also the maximum resistance of wear and tear on any flat or curved surface.
