TOMORROW'S PROTECTION

Certified Field Filming Program

Listed and labeled by Intertek/Warnock-Hersey

Finally.

An affordable solution that protects
against injury and liability.

SAFTI *FIRST's* Certified Field Filming Program is the only field filming program that upgrades traditional wired glass to a listed and labeled 20-90 minute fire rated product that meets the new safety requirements of the 2003 and 2006 International Building Code (IBC).

What are the new national code requirements for wired glass?

Traditional wired glass has long been believed to be safety glass. Nothing could be further from the truth. The combination of steel wire with annealed glass has resulted in countless tragic injuries to unsuspecting victims and stunning liability judgments against building owners. Recent safety mandates dictated by the International Code Council's model building codes have put an end to the previous exemption of traditional wired glass from safety glazing performance requirements. In effect, all glazing in potentially hazardous locations (i.e., doors and sidelites) must now comply with Federal Consumer Products Safety Commission (CPSC) impact resistance standards. All additions and alterations to existing buildings must comply with the new codes. This includes the replacement of existing wired glass.

How does SAFTI *FIRST'S* Certified Field Filming Program help you protect occupants and meet code requirements?

Applying safety film to dangerous glass is not the simple solution. Upgrading existing fire-rated wired glass to meet CPSC impact safety standards must be done under the guidelines and supervision of a labeled service program to ensure code compliant product performance. Failure to do so exposes the building owner to product failure liabilities.

Extensive testing of SAFTI *FIRST'S* filmed fire-rated products and filming procedures by Intertek Testing Services (ITS), an internationally recognized and certified testing laboratory, eliminates any uncertainty of product performance. ITS certifies the film applicator's training and then monitors the labeled service provider's ongoing activity through periodic audits and the regular review of installation records.

Can SAFTI *FIRST'S* Certified Field Filming Program help you replace damaged film on existing fire-rated glass?

Yes. The replacement of damaged film on labeled and listed fire-rated glazing products such as safety-rated wired glass and ceramics must also be done under the guidelines and supervision of a labeled service program to ensure code compliant product performance.

Currently, SAFTI *FIRST'S* Certified Field Filming Program is the only code compliant service addressing the needs of building owners seeking to upgrade dangerous traditional wired glass or replace damaged fire-rated film. Building owners across the U.S. are recognizing the risk of shortcut solutions.

Above is an example of wired glass installed in a hazardous location. SAFTI *FIRST'S*'s Certified Field Filming program provides an affordable alternative to glass replacement.

With over 25 years as America's leader in fire-rated glazing and framing innovation, SAFTI *FIRST* is the preferred choice of architects, specifiers and contract glaziers nationwide. Our products include:

- **SuperLite I** 20-30 minute specialty tempered
- **SuperLite I-XL** 20-60 minute patented specialty tempered with radiant heat protection (does not meet ASTM E119 and AHJ approval required for 45-60 minute applications)
- **SuperLite I-W** 20-90 minute patented safety wired glass
- **PYRAN® Platinum** 20-90 minute premium ceramic glass
- **PYRAN® Platinum F** 20-180 minute premium safety ceramic glass
- **SuperLite II-XL** 45-120 minute fire resistive glazing tested to ASTM E119
- **SAFTI*fire* Framing** 20-120 minute fire-rated framing for temperature rise and non-temperature rise applications

Our products are manufactured in the USA with fast lead times and competitive pricing.
